

Product Requirements Document (PRD)

Project: Stage Decoration Business — Catalogue & Booking Enquiry Website **Prepared by:** Vishnu **Location:** Puducherry, India **Version:** 1.0

1. Overview

A web platform for a stage decoration business that allows customers to browse a design catalogue, create an account, and raise an enquiry on a design they like. Each enquiry generates a unique reference ID that the customer quotes when contacting the business owner directly (call/WhatsApp) to confirm booking and payment offline. The business owner manages all content (designs, categories, services, business details) and all enquiries through a private admin panel. No online payment is processed on the platform.

2. Goals

- Present the business's work through a clean, fast, photo-first catalogue.
- Let customers self-serve: browse, filter by occasion, and raise an enquiry without a phone call.
- Replace informal WhatsApp-photo-sharing with a structured, trackable enquiry system (unique reference ID).
- Give the non-technical business owner full content control with no developer dependency after launch.
- Keep infrastructure cost at zero beyond the domain name, using free-tier and open-source services suited to low/medium traffic.

3. Non-Goals (Out of Scope)

- No online payment gateway or in-app payment collection.
- No fully automated WhatsApp messaging (uses `wa.me` click-to-chat link, not WhatsApp Business API).
- No multi-vendor support — single business only.
- No real-time chat between customer and admin.

4. User Roles

Role	Description
Visitor	Unauthenticated public user. Can browse public pages only.
User (Customer)	Registered, logged-in customer. Can browse, enquire on designs, track own enquiries, manage own profile.
Admin (Business Owner)	Registered with elevated role. Manages designs, categories, services, enquiries, business settings, and the user list.

5. User Stories

Customer

- As a visitor, I can browse the gallery by occasion category without logging in, so I can decide if I'm interested before signing up.
- As a visitor, I can sign up with my name, phone, email, gender, address, and pincode, so I can raise enquiries.
- As a user, I can open a design and click "Enquire," so I get a unique reference ID to quote the owner.
- As a user, I can see a list of my past and current enquiries with their status, so I know where I stand without calling to ask.
- As a user, I can download a PDF receipt of my enquiry, so I have a record.
- As a user, I receive an email confirming my enquiry, so I have written proof.
- As a user, I can tap a WhatsApp button to message the owner with my enquiry ID pre-filled, so contacting them is effortless.
- As a user, I can edit my own profile details.

Admin

- As the admin, I can log in to a panel separate from the public site.
- As the admin, I can add, edit, and delete designs (photo, title, description, category).
- As the admin, I can add, edit, and delete occasion categories.
- As the admin, I can search for an enquiry by its reference ID and see the customer's details and the design selected.
- As the admin, I can update an enquiry's status (pending, contacted, confirmed, rejected).
- As the admin, I can add, edit, and delete services shown on the public Services page.
- As the admin, I can edit business settings (phone, WhatsApp number, address, map link, social links) without code changes.
- As the admin, I can view all registered users and their enquiry history.

6. Information Architecture — Screens

Public (no login)

1. Home — hero banner, tagline, featured designs, call to action
2. Gallery — grid of designs, filterable by category, search
3. Design Detail — large photo(s), description, "Enquire" button (prompts login if not authenticated)
4. Services — list of services with description/icon
5. About — business story, experience, service area
6. Contact — phone, WhatsApp button, address, map embed, general contact form

7. Login
8. Signup — name, phone, email, gender, address, pincode, password

Customer (after login)

9. User Dashboard — welcome, quick links
10. My Enquiries — list with reference ID, design, date, status
11. Enquiry Detail — design photo, date, status, admin notes, PDF download, WhatsApp button
12. My Profile — view/edit own details

Admin (after admin login)

13. Admin Dashboard — summary cards (total designs, total enquiries, pending enquiries, total users)
14. Manage Gallery — list of designs, add/edit/delete
15. Add/Edit Design — photo upload, title, category, description
16. Manage Categories — add/edit/delete
17. Manage Enquiries — table of all enquiries, filter by status, search by reference ID, detail view, status update
18. Manage Services — add/edit/delete
19. Manage Users — list of registered users, detail view with enquiry history
20. Business Settings — phone, WhatsApp number, address, map link, social links

Shared

21. 404 Not Found
 - Header/Nav — logo, menu, login/signup or user avatar menu
 - Footer — business name, contact, quick links, social icons

7. Functional Requirements

7.1 Authentication

- Email + password signup/login via Supabase Auth.
- Email verification/OTP on signup.
- Role (`admin` / `user`) stored in a `profiles` table, linked to the Auth user ID.
- Row Level Security (RLS): users can read/update only their own profile and enquiries; admin has full read/write access to all tables.

7.2 Enquiry Workflow

1. Logged-in user opens a design and clicks "Enquire."
2. System creates a row in `bookings` with a generated short unique `enquiry_id` (e.g., `A1203`), status `pending`.

3. User sees a confirmation screen with the enquiry ID.
4. A PDF receipt is generated (jsPDF/pdf-lib) containing enquiry ID, design, customer name, and date; downloadable by the user.
5. A confirmation email is sent automatically (Resend or Nodemailer) to the user's registered email.
6. The user can tap a `wa.me` link, pre-filled with a message containing the enquiry ID and design name, to contact the owner.
7. Admin searches the enquiry ID in the admin panel, reviews the customer and design, and updates status as they follow up: `pending → contacted → confirmed` or `rejected`.
8. The user's "My Enquiries" screen reflects the updated status.

7.3 Content Management (Admin)

- Upload a design photo via a simple file picker; image is compressed and converted to WebP server-side (Sharp) before storing in Supabase Storage.
- Preview before publish.
- Edit/delete any design, category, or service.
- Edit business settings as plain form fields (no code/config file editing required).

7.4 Notifications

- Email: automatic, on enquiry creation (free tier, ~100/day).
- WhatsApp: manual one-tap via `wa.me` link (no automatic server-side send, to avoid paid API cost).

8. Data Model

Table	Key Fields
<code>profiles</code>	id (UUID, FK to auth.users), role, name, phone, email, gender, address, pincode, created_at
<code>categories</code>	id, name
<code>designs</code>	id, title, description, category_id (FK), image_url, created_at
<code>bookings</code>	id, enquiry_id (short unique code), user_id (FK), design_id (FK), status, booking_date, admin_notes
<code>services</code>	id, title, description, icon/image_url
<code>business_settings</code>	phone, whatsapp_number, address, map_link, social_links

Storage buckets: `design-images`, `business-assets`, `receipts` (optional, for generated PDFs).

9. Technology Stack

Layer	Technology	Notes
Frontend framework	Next.js (React)	SSR for SEO, routing
Styling	Tailwind CSS	
Forms/validation	React Hook Form + Zod	
Icons	React Icons / Heroicons	No emoji anywhere in the UI
Images	next/image	Lazy loading, responsive
Alerts	react-hot-toast	
Dates	date-fns	
PDF generation	jsPDF / pdf-lib	
Email	Resend (or Nodemailer + Gmail SMTP)	Free tier
WhatsApp	wa.me click-to-chat link	No paid API
Database	PostgreSQL (via Supabase)	
Backend/BaaS	Supabase	Auth, DB, Storage
Auth	Supabase Auth, email OTP/verification	
File storage	Supabase Storage	~1 GB free tier
Image compression	Sharp	WebP conversion, resize
Access control	Row Level Security (RLS)	
Hosting	Netlify	Auto-deploy from GitHub
Version control	GitHub	
CI/CD	GitHub Actions	Build checks, Supabase keep-alive ping
Domain/SSL	Any registrar + Netlify DNS + Let's Encrypt	Only paid item (domain)

All libraries are open source (MIT/Apache 2.0); Supabase itself is Apache 2.0 and self-hostable if ever needed.

10. Non-Functional Requirements

- **Performance:** Images served as compressed WebP; lazy-loaded; target first paint under 2 seconds on 4G.
- **Responsiveness:** Fully usable on mobile, tablet, desktop — admin panel included, since the owner will mostly use a phone.
- **Security:** Passwords hashed (bcrypt, handled by Supabase Auth); HTTPS everywhere; RLS enforced at the database level, not just in the UI.
- **Reliability:** Supabase free-tier projects pause after 7 days of inactivity — mitigated with a weekly GitHub Actions keep-alive ping.
- **Capacity:** Current free-tier limits (500 MB database, 1 GB storage) comfortably support several thousand compressed design photos and years of enquiry/user records at this business's expected volume.
- **Accessibility/Tone:** Clean, professional visual design; no emoji in UI copy or admin messaging.

11. Assumptions

- Business has (or will provide) an existing photo catalogue to seed the gallery.
- Single admin account for now (multi-admin not required at launch).
- Customer volume is low to moderate (small local business), well within free-tier limits.
- No requirement for Tamil/English language toggle at launch (can be added later).

12. Commercials

- Development cost: Rs. 6,000 (50% advance, 50% on delivery).
- Domain registration: Rs. 600–900/year, billed separately, paid directly by the client to the registrar.
- Hosting/database/storage: no recurring cost at current scale (free tiers).

13. Milestones

1. Collect catalogue photos, categories, services, and business details from the client.
2. Build core public site (Home, Gallery, Design Detail, Services, About, Contact).
3. Build auth + customer flows (signup, login, enquiry, My Enquiries, profile).
4. Build admin panel (designs, categories, enquiries, services, settings, users).
5. Integrate PDF receipt, email notification, WhatsApp link.
6. Testing (mobile + desktop), client review.
7. Deploy to production domain, go live.

14. Future Enhancements (Phase 2, not in current scope)

- Tamil/English language toggle.
- Testimonials section.
- Analytics dashboard for the admin.
- Multiple admin users with permission levels.
- SEO content/blog section.
