Address	No. 80, Manjini Nagar, Bachanai Madam Street, Muthiyai Pettai, Puducherry
Services offered	Wedding Decoration, Birthday Decoration, Surprise Parties, Corporate Events
Tagline	We Decor Your Dreams

1. Project Overview

This document describes the website proposed for your stage decoration business. The website will serve as an online catalogue of your decoration designs and a simple enquiry system, allowing customers to browse your work, select a design they like, and reach out to you directly to confirm a booking.

The platform is built to be clean, fast, and easy to use on both mobile phones and computers, giving customers a professional first impression while keeping day-to-day management simple for you.

2. Objectives

- Present your decoration work professionally with a high-quality photo gallery.
- Allow customers to browse designs by occasion (wedding, reception, birthday, housewarming, and others).
- Let customers register, select a design, and raise an enquiry with a unique reference number.
- Give you full control to add, update, or remove designs, services, and business details without needing a developer.
- Keep the system simple: no online payment is involved. The website handles catalogue browsing and enquiries only — final confirmation happens directly between you and the customer.

3. How the Website Works

For Customers

- Create an account with basic details (name, phone number, email, gender, address, pincode).
- Browse the design gallery, filtered by occasion type.
- Select a preferred design and raise an enquiry.
- Receive a unique enquiry reference number (for example, A1203) along with a confirmation on screen.
- Contact you directly by phone or WhatsApp, quoting the reference number.
- View the status of their enquiries at any time (pending, contacted, confirmed, or declined).

For You (Business Owner)

- Log in to a private admin area, separate from the customer-facing site.
- Add new designs with photos, titles, descriptions, and occasion categories.
- Search any enquiry using its reference number to see the customer's details and the design selected.
- Update the status of each enquiry as you follow up with the customer.
- Edit your services, business description, contact number, WhatsApp number, and address at any time.
- View a complete list of registered customers and their enquiry history.

4. Website Structure

The website is organised into three areas:

Section	Purpose
Public Pages	Home, Gallery, Services, About, Contact — visible to all visitors, no login required
Customer Account	Sign up, log in, browse and enquire about designs, track enquiry status, manage own profile
Admin Panel	Private area for the business owner to manage designs, categories, services, enquiries, and site details

A full page-by-page layout (21 screens in total) has been planned and is available on request.

5. Key Features

Feature	Description
Design Gallery	Photos organised by occasion, with a clean, modern browsing experience
Customer Accounts	Secure sign-up and login for every customer
Enquiry System	One-click enquiry on any design, generating a unique reference number
Enquiry Receipt	A downloadable PDF summary of the enquiry for the customer's reference
Email Notification	Automatic email confirmation sent to the customer after an enquiry
WhatsApp Contact	One-tap WhatsApp message option pre-filled with the enquiry details
Admin Dashboard	Centralised control of designs, services, enquiries, and business information
Mobile Friendly	Fully usable on phones, tablets, and computers

6. Reliability and Security

- All customer and business data is stored securely with password protection.
- Customers can only see and manage their own information; only you can see all enquiries and customer records.
- Photos are automatically optimised for fast loading without losing visual quality.
- The website is served securely (HTTPS) with an encrypted connection on every page.

7. Scope Clarification

- No online payment collection is included on the website itself. Payment and final booking confirmation are handled directly between you and the customer, as per your current process.
- WhatsApp messages are sent via a one-tap link that opens WhatsApp with the message ready; it is not fully automatic, to avoid ongoing messaging service costs.

8. Investment and Payment Terms

Item	Amount
Website development (design, build, testing, and delivery)	Rs. 6,000
Domain name registration (yearly, billed separately)	
Hosting and database	

Payment Schedule

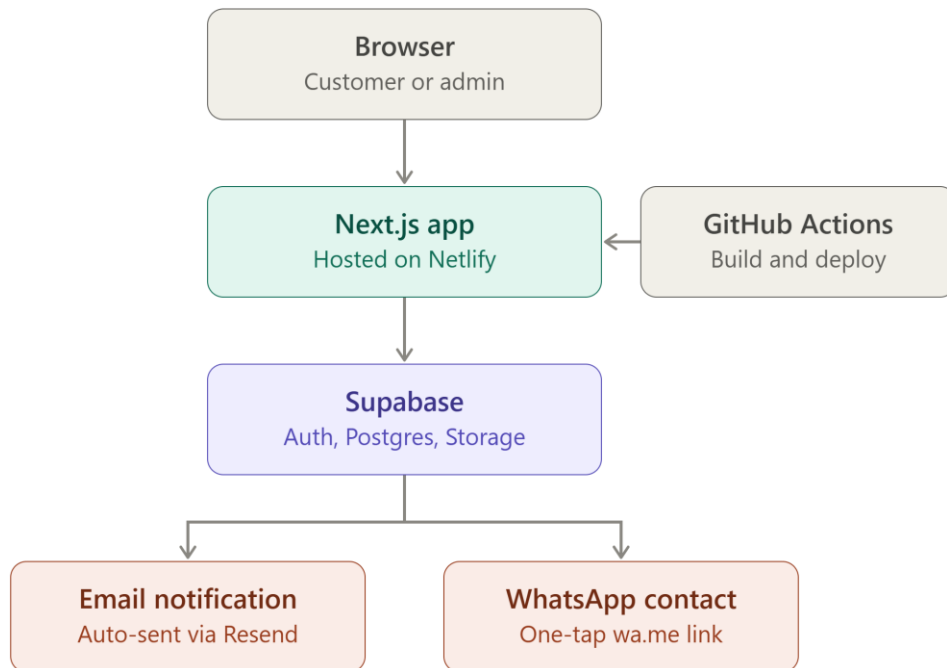

- 50% advance (Rs. 3,000) to begin development.
- 50% balance (Rs. 3,000) on completion, before the website goes live.
- Domain renewal is an annual cost, payable by you directly to the domain registrar each year.
- Payment can be made via UPI or bank transfer.

9. Information and Documents Required from You

To begin development, the following details and materials are needed from you:

- Business name and logo (received: Sri Kubera Decor & Events).
- Catalogue photos, sorted by occasion (wedding, reception, birthday, housewarming, surprise party, corporate event, and so on).
- For every photo sent, the following is needed before it can be published on the website:
 - A name or title for the design (for example, "Golden Mandap Setup")
 - A short description of the design
 - The price for that design
 - What is included in the decoration (for example: lights, artificial or fresh flowers, leaves/greenery, cloth drapes, backdrop, props)
- Without these details, a design photo cannot be added to the live gallery.
- A list of your services with a short description for each.
- Contact phone number and WhatsApp number to be shown on the website.
- Business address and the areas you provide service to.
- A short write-up about your business for the About page (experience, specialty, years in business).
- Any existing social media links (Instagram, Facebook) to be linked from the site, if available.
- Two to three preferred domain name options (for example, yourbusinessname.com).
- Any colour or style preference for the website, if you have one. Otherwise a professional theme will be chosen for you.

10. Architecture Diagram

Appendix A: Technology Stack

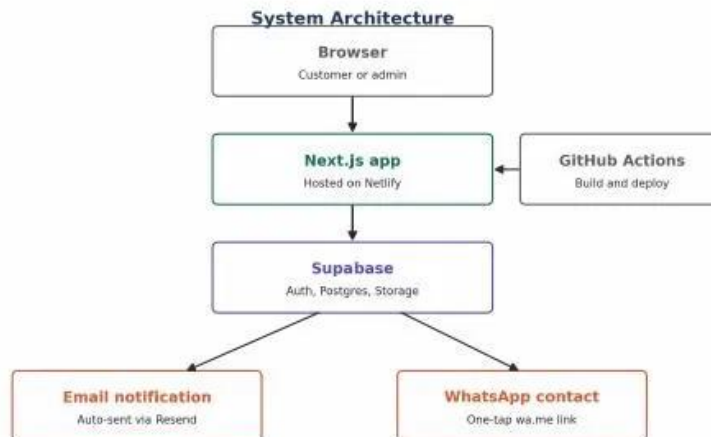

This section lists the technologies used to build and run the website. All software used is free and open source, except the domain name registration.

Layer	Technology	Purpose
Frontend framework	Next.js (React)	Pages, routing, SEO-friendly rendering
Styling	Tailwind CSS	Clean, consistent design system
Forms and validation	React Hook Form + Zod	Signup, login, enquiry forms
Icons	React Icons / Heroicons	Clean UI icons, no emoji
Images	next/image	Lazy-loaded, responsive gallery images
PDF generation	jsPDF / pdf-lib	Enquiry receipt PDF
Email	Resend (or Nodemailer + Gmail SMTP)	Automatic enquiry confirmation email
WhatsApp contact	wa.me click-to-chat link	One-tap message to the owner, no paid API
Database	PostgreSQL (via Supabase)	Stores all structured data
Backend / BaaS	Supabase	Authentication, database, file storage
Authentication	Supabase Auth	Email/OTP based signup and login
File storage	Supabase Storage	Design photos, logo, receipts
Image compression	Sharp	Converts uploads to compressed WebP
Access control	Row Level Security (RLS)	Users see only their own data; admin sees all
Hosting	Netlify	Hosts the website, auto-deploys from GitHub
Version control	GitHub	Source code repository
CI/CD	GitHub Actions	Build checks and automatic deployment
Domain and SSL	Domain registrar + Netlify DNS + Let's Encrypt	Custom domain with free HTTPS

Appendix B: System Architecture

The diagram below shows how the different parts of the system connect. The browser (used by both customers and the admin) talks to the Next.js application hosted on Netlify. Netlify deploys automatically through GitHub

Actions whenever code is updated. The application connects to Supabase for authentication, the database, and file storage. When a customer raises an enquiry, the system sends an automatic email confirmation and offers a one-tap WhatsApp link to contact the business owner directly.

Appendix C: Data Model

The database is organised into the following tables:

Table	Stores
profiles	User and admin details: name, phone, email, gender, address, pincode, role
categories	Occasion types: wedding, reception, birthday, housewarming, and others
designs	Design title, description, category, photo link, price, and inclusions (lights, flowers, leaves, etc.)
bookings	Enquiry ID, customer, selected design, status, date, admin notes
services	Service name and description shown on the public Services page
business_settings	Phone, WhatsApp number, address, map link, social links

Design photos, the business logo, and generated enquiry receipts are stored separately in Supabase Storage; the database holds only a link to each file, keeping the database itself lightweight.

11. Next Steps

- Collect the above information and documents from you.
- Development and testing of the website.
- Review of the completed site with you before it goes live.
- Advance payment to begin; balance payment on delivery.
- Website goes live on your chosen domain.
